

## How to create a Jump cell

This video will show you how to create a jump cell that jumps to a new page. In this video we will also show you how to copy a template page which will include all action cells. For the purpose of this video we are using Supercore 50.

We are going to add a new topic, to do this we are going to go on to our “topics” page.

To edit the grid you must be in editing mode, to do this press the 3 dots in the top right corner of the screen, and select “edit mode”

You will notice that now we are in editing mode there is an orange border around the screen, and a label at the top telling you which page you are on.

We are going to add a jump cell in a new row, to do this we select the cell and press “jump to another grid” this will bring up all of the pages available in the Supercore 50 gridset.

As mentioned earlier, we are going to copy a template to ensure we have all of the action cells and sentence bar at the top of the screen, to do this we are going to select the “copy grid” option.

We are going to search for “template”, when we find the “topics template” we select it.

You will notice that this will bring up an option to name the grid, we rename this to “TV”. Notice that we are only taking the words “template” and “copy” out of the name, we keep the beginning as the TV page is being placed on the topics page.

We then press “done” when we have named our page.

We remove “15 – Topics” from the label, so that the text on the cell just says “TV”.

To add a picture to the cell, we press the bottom box and select a symbol available from the options.

We then press the “follow jump” option on the menu of the right side of the screen, this takes us through to our new page we have just created, we know we are on the correct page because the label at the top tells us.

To see how we begin to populate content on this page, you can watch the video on write cells.
