

NBT bladder cancer risk stratification for non-muscle invasive disease

1. Low risk

- Solitary G1pTa or G2pTa <3cm

2. Intermediate risk

- solitary G1pTa or G2pTa >3cm
- multifocal G1pTa or G2pTa
- G2pTa (high grade)
- any low risk NMIBC recurring within 12 months of last recurrence

3. High risk

- Any of - G2pT1, G3pTa, G3pT1, CIS
- rare variants such as micropapillary
- very recurrent and large G2 ta
